DETAILED ACTION

Drawings

1. Figures 5-6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art (APA), figure 7, in view of Miyazaki et al., US Patent No. 5,978,061.

Art Unit: 2871

Regarding the above claims, APA disclose a liquid crystal display (LCD) device (figure 7), in which:

a color filter substrate (lower substrate) comprising:

a substrate (201);

a reflective layer (205);

a color filter layer (206).

an opposed substrate (upper substrate);

a liquid crystal layer (203);

a sealing material (204).

However, APA does not disclose the color filter forming inside the sealing material and outside the effective display area. Miyazaki et al. do disclose a color filter substrate (30) comprising a color filter (32) being formed inside a sealing material (37) as well as outside an effective display area (i.e., off display area) (see figures 9 and 11). Miyazaki et al. also disclose in a portion of the color filter layer outside the effective display area, two or three different color layers stacked on each other (32R, 33G, 33B). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to modify the APA's LCD device having the color filter which is extending to outside the effective display as shown by Miyazaki et al. in order to enhance the display quality as well as to decrease the number of forming steps (see paragraph bridging columns 11 and 12).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
